Interview Questions

How to find the text on an element?
Find the element using
element = driver.find_element()
output = element.text

How to find the value of an attribute of an element?
Find the element using
element = driver.find_element()
output = element.get_attribute("attribute name")

What is one more way to find the text on an element?
Find the element using
element = driver.find_element()
output = element.get_attribute("innerText")

How can we check if element is present on the web page?
We can create utility methods
There are two ways:

1. Use driver.find_element() within try, except block and return true if the element is not none and return false if the element is none
2. Use driver.find_elements() to get the list of elements and return true if the size of the list is greater than 0 and return false if it is less than 1
